Research Vision

Mission: *To enable domain experts to write the code they need without sacrificing their autonomy.*

I co-design programming systems with domain experts. These programming systems empower them to write the code they need with autonomy.

To make new user interactions possible in these systems, I develop **programming language theory** informed by what I learn from (i) deeply embedding with domain experts and (ii) my mixed-methods human-computer interaction research.

Primary area: Programming languages ∘ **Secondary area:** Human-computer interaction
