# Composite AV Cable

Use the Composite AV Cable to connect your iPod, iPhone, or iPad to the composite video port and analog audio ports on your TV, home theater receiver, or stereo receiver. The Composite AV Cable has a USB connector that you can plug into a power source, such as a computer or a USB Power Adapter.

Before you begin connecting components, turn off the power to all your components. Remember to make all connections firmly to avoid humming and noise.

**Important:** Never force a connector into a port. If the connector and port don't join with reasonable ease, they probably don't match. Make sure that the connector matches the port and that you have positioned the connector correctly in relation to the port.

## To use the Composite AV Cable to connect iPod, iPhone, or iPad to your TV or receiver:

- 1 Plug the yellow video connector into the video input port on your TV or receiver.
- 2 Plug the white and red audio connectors into the left and right analog audio input ports, respectively, on your TV or receiver.
- 3 Plug the iPod Dock Connector into your iPod, iPhone, iPad, or Universal Dock.
- 4 Plug the USB connector into your computer or a USB Power Adapter to keep your iPod, iPhone, or iPad charged.
- 5 Turn on iPod, iPhone, or iPad and your TV or receiver to start playing.

Make sure you set your iPod, iPhone, or iPad to send a video signal out to your TV or receiver. For more information, see the user guide for your iPod, iPhone, or iPad, available on the web at [www.apple.com/support/manuals](http://www.apple.com/support/manuals).

Refer to the manual that came with your TV, receiver, or other device for the location of its ports.

**Note:** If your iPod doesn't support video, you can use the Composite AV Cable for syncing content and charging.

- Turn the television or radio antenna until the interference stops.
- Move the computer to one side or the other of the television or radio.

This product was tested for FCC compliance under conditions that included the use of Apple peripheral devices and Apple shielded cables and connectors between system components.

It is important that you use Apple peripheral devices and shielded cables and connectors between system components to reduce the possibility of causing interference to radios, television sets, and other electronic devices.
