DELLTechnologies

Provide cloud services with automation and integration of key infrastructure & applications

Dell Services for VMware Aria

Elevate your on-premises workloads with cloud benefits

The rise of IT complexity and operational toil are closely intertwined. In order to increase productivity and simplify operations, automation and observability are key.

Dell's services are designed to provide the implementation, customization, configuration and automation of multicloud infrastructure services, as well as providing operations and cost management across your cloud environments. You'll gain the benefits of a multicloud platform with key automation and integration features to quickly drive agility and value, along with deep visibility into the performance characteristics of the platform.

Dell Technologies Services

- **Over** 10,000 transformation projects completed

- **Focus** on beneficial and lasting change utilizing best practices

- **Proven** approach to drive outcomes

- **Harmonize** business and IT needs

✓ Simplify and create a consistent cloud experience with automation

✓ Gain visibility into operations and performance of your VMware Cloud infrastructure

✓ Operationalize your cloud to deliver IT services

Implementation Services for VMware Aria Automation

Create a consistent cloud experience with automation

- Rapidly set up and manage multicloud environments through an intuitive, self-service consumption platform

- Expand multi-cloud service catalog options and management integration points by offloading manual tasks with advanced workflows and agile templating

- Extend the cloud platform to support public cloud hyperscalers, multi-site availability, along with cost visibility and observability of the platform

Implementation Services for VMware Aria Automation Config

- Build a desired configuration once and enforce it through the lifecycle, with workloads automatically provisioned and managed by VMware Aria Automation

- Extend software deployment, security compliance enforcement, vulnerability management and other provisioned workload configuration management

Implementation Services for VMware Aria Cost powered by CloudHealth

- Provide centralized cloud costs and usage management for a multicloud environment utilizing VMware Aria Cost

- Create the ability to dynamically allocate costs to business groups and establish accountability among multicloud users, building confidence around budgets and forecasts

Implementation Services for VMware Aria Operations

Gain visibility into operations and performance of your VMware Cloud infrastructure

- Increase ROI and reduce unplanned downtime within your virtual infrastructure

- Accelerate agility and unify operations with proactive performance and capacity management, planning and operations with actionable insights

- Extend the capabilities in a stretched configuration including multiple fault domains and collector groups including visibility into your regulatory compliance

DELLTechnologies

Integration Service for VMware Aria Automation

Operationalize your cloud to deliver IT services

- Increase productivity eliminating manual or semi-manual tasks

- Gain predictability and consistency by integrating key systems with your multicloud environment

- Respond to cloud consumers with fast and agile IT service delivery by providing the resources cloud consumers need, in the way they need it to be delivered

Integration Services for ServiceNow with VMware Aria

Let users provision and manage VMs through their everyday ServiceNow interface

- Enable self-service provisioning or decommissioning of virtual machines using ServiceNow integration with Aria Automation

- Enable Day 2 self-service operations to use ServiceNow to power virtual machines on or off and reconfigure VM CPU and memory through Aria Automation

Take the next step in your path to multicloud with Dell Technologies Services

Utilizing VMware's Aria suite enables you to provide hybrid or multicloud services to your cloud consumers through automated processes and operational visibility across your entire cloud infrastructure. Dell Technologies Services offers an extensive portfolio to empower your teams and help you realize your business outcomes for multicloud.
